Business case – Investment group

Introduction

The business case is about an investment group that owns several companies. The group's main business involves purchasing land in Latvia, primarily forestland, but the group also owns agricultural and other types of land. The group needs to build a database that will provide a list of all properties they own across the companies in the group, including assets held by each company. Additionally, the group aims to create queries for management to assist in decision-making and reporting.

1. Business Case Description

The investment group, which expands its activities in the territory of Latvia, deals with real estate, mostly buying up forest land.

The investment group includes several companies that belong exclusively to this group.

Each company has its own manager, but a manager can manage several enterprises of this group.

Enterprises does not have any limitation for how many real estate properties they have and will buy in future.

Each real estate property could be divided in to several land units and land unit could consist of 1- 3 types – forestland, agriculture land and other land.

1.1. Business objects:

- Company *(Comp_reg_no, Comp_name, Comp_Address, Comp_email)*
- Manager (*Mgr_pers_ID, Mgr_name , Mgr_surname, Mgr_email, Mgr_tel_No)*
- Real estate property *(Prop_ID, Prop_name,Prop_county, Prop_parish, Prop_purch_date, Prop_purch_value_EUR)*
- Land unit *(Unit_ID, Unit_cad_value_EUR)*
- Land *type (Type_ID, Type_area_ha)*

1.2. Business rules

One Group include many companies

One company belongs to one and only group

The company is managed by one manager

One manager could lead several companies

A company may own several real estate properties

One real estate property belongs to one company

One real estate property must include at least one land unit

One land unit should belong to one and only real estate property

One land unit consist of at least one, but up to three land types

One land type of unit belongs to one land unit

1.3. Possible requests that could be performed against the database:

a. Get a list off all properties?
b. How many hectares of land does the group own, divided by each land type?
c. How many real estate properties and hectares manages each manager?
d. Get a list of land units, where agricultural land is dominating?
e. Get a list of properties, where forestland is dominating?
f. How many EUR did each company spend on the purchase of real estate in the current and previous year?
g. Top 10 most expensive purchased properties EUR/ha in current year?

2. Database conceptual model

2.1. List of entities:

- Company *(Comp_reg_no, Comp_name, Comp_Address, Comp_email)*
- Manager (*Mgr_pers_ID, Mgr_name , Mgr_surname, Mgr_email, Mgr_tel_No)*
- Real estate property *(Prop_ID, Prop_name,Prop_county, Prop_parish, Prop_purch_date, Prop_purch_value_EUR)*
- Land unit *(Unit_ID, Unit_cad_value_EUR)*
- Land *type (Type_ID, Type_area_ha)*

2.2. Relationships:

The company is managed by one manager

One manager could lead several companies

- *Company : Manager -> M:1*

A company may own several real estate properties

One real estate property belongs to one company

- *Company : Property ->1:M*

One real estate property must include at least one land unit

One land unit should belong to one and only real estate property

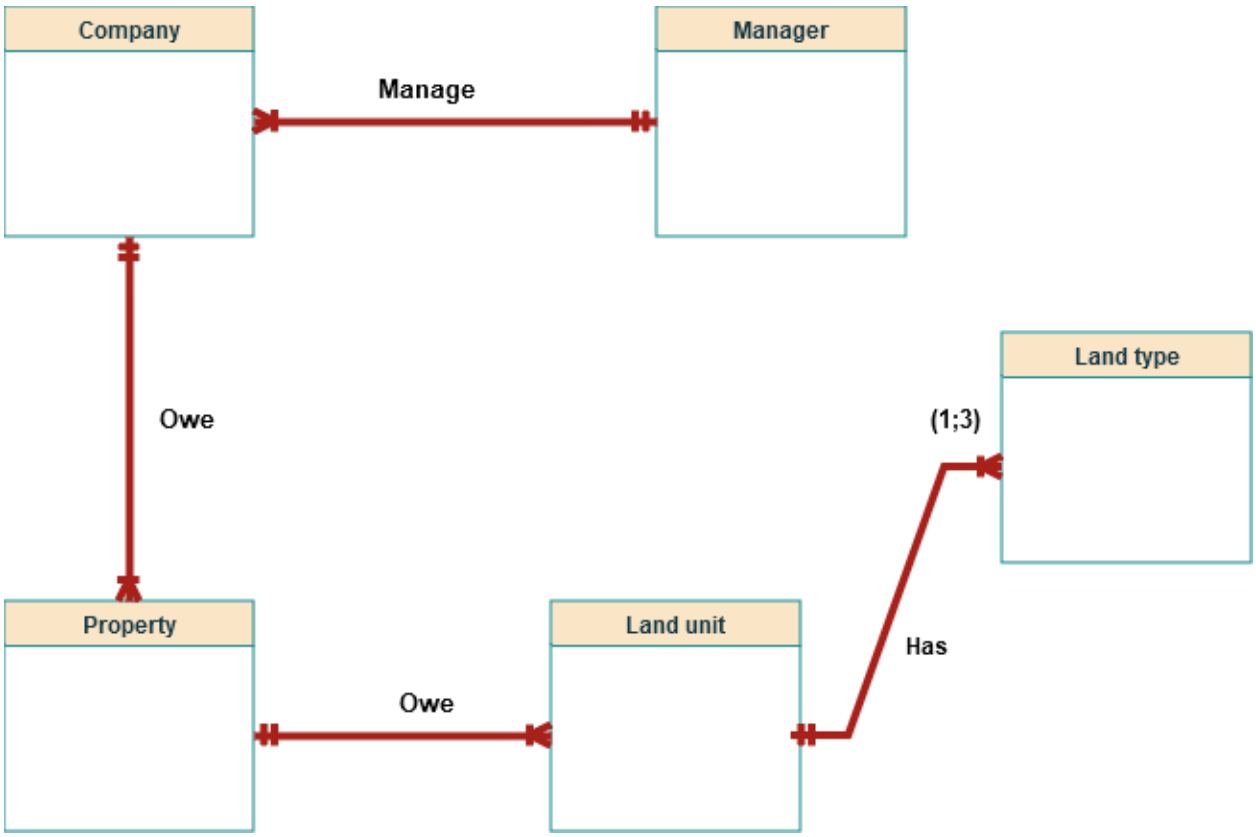

- *Property : Land unit ->1:M*

One land unit may consist of at least one land type

One land type of unit belongs to one land unit

- *Land unit : Land type -> 1:M*

2.3. ERD for the conceptual Model

2.4. Attributes and Primary Keys (Primary keys marked red)

- Company *(Comp_reg_no, Comp_name, Comp_Address, Comp_email)*
  PK
- Manager (*Mgr_pers_ID , Mgr _name, Mgr _surname, Mgr _email, Mgr _tel_No)*
  PK
- Poperty *(Prop_ID,Property_name, Prop_county, Prop_parish, Prop_purch_date, Prop_purch_value_EUR)*
  PK
- Land unit *(Unit_ID, Unit_cad_value_EUR)*
  PK
- Land type *(Type_ID, Type_area_ha)*

  PK

2.5. Attribute Value Domains (examples)

Entity	Attributes	Description	Data type, length	Null	Possible values, constraints, formats
Company	Comp_reg_no	Company registration number	Char(11)	No	XXXXXXXXXXX
	Comp_name	Company name	Varchar(100)	No	
	Comp_Address	Company address	Varchar(100)	Yes	
	Comp_email	Company email address	Varchar(30)	No	X…X@X…X
Manager	Mgr_pers_ID	Manager Personal ID number	Char(12)	No	XXXXXX-XXXXX
	Mgr_name	Manager name	Varchar(20)	No	
	Mgr_surname	Manager surname	Varchar(20)	No	
	Mgr_email	Manager email	Varchar(30)	No	X…X@X…X
	Mgr_tel_No	Manager phone number	Varchar(15)	Yes	
Real estate property	Prop_ID	Property cadaster number	Char(11)	No	XXXXXXXXXXX
	Prop_name	Property name	Varchar(20)	No	
	Prop_county	County	Varchar(20)	No	
	Prop_parish	Parish	Varchar(20)	Yes	
	Prop_purch_date	Property purchase date	Date	No	dd/mm/yyyy
	Prop_purch_value_EUR	Property purchase value(EUR)	Money	No	
Land unit	Unit_ID	Land unit identifier	Char(11)	No	XXXXXXXXXXX
	Unit_cad_value_EUR	Land plot cadarstral value	Money	No	
Land type	Type_ID	Land type ID	Char(12)	No	FXXXXXXXXXXX AXXXXXXXXXXX OXXXXXXXXXXX
	Type_area_ha	Land type area in ha	Decimal(10,2)	No	

2.6. Checking against queries: Do we have sufficient attributes?

a) Get a list off all properties?
We have property entity which contains – property ID, county, parish, area etc.

b) How many hectares of land does the group own, divided by each land type?
We have entity – land type and it contains land type attribute and area.

c) How many real estate properties and hectares manages each manager?
We have manager entity which is connected to company entity which is connected to real estate property entity, it contains area data.

d) Get a list of land units, where agricultural land is dominating?
There is a land type entity, which include type ID and it area in hectares, this entity is connected with entity land unit.

e) Get a list of properties, where forestland is dominating?
There is a land type entity, which include type ID and it area in hectares, this entity is connected with entity land unit and land unit entity is connected with property entity.

f) How many EUR did each company spend on the purchase of real estate in the current and previous year?
We have company entity, which is connected to real estate property, where is all necessary data-purchase date and purchase price.

g) Top 10 most expensive purchased properties EUR/ha in current year?
We can get data from property entity by using attributes – property price, property purchase date and land type entity – type area.

3. Logical model

3.1. Resolving the relationships

- **Company : Manager -> M:1**

Company*(Comp_reg_no, Mgr_pers_ID, Comp_name, Comp_Address, Comp_email)*

PK FK

Manager*(Mgr_pers_ID, Mgr_name, Mgr_surname, Mgr_email, Mgr_tel_No)*
PK

- **Company : Property ->1:M**

Company*(Comp_reg_no, Mgr_pers_ID, Comp_name, Comp_Address, Comp_email)*

PK FK

Property*(Prop_ID, Comp_reg_no, Prop_name, Prop_county, Prop_parish, Prop_purch_date, Prop_purch_value_EUR)*
PK FK

- **Property : Land unit ->1:M**

Property*((Prop_ID, Comp_reg_no, Prop_ name, Prop_county, Prop_parish, Prop_purch_date, Prop_purch_value_EUR)*

PK *FK*

Land unit(*Unit_ID, Prop_ID, Unit_cad_value_EUR)*

PK *FK*

- **Land unit : Land type -> 1:M**

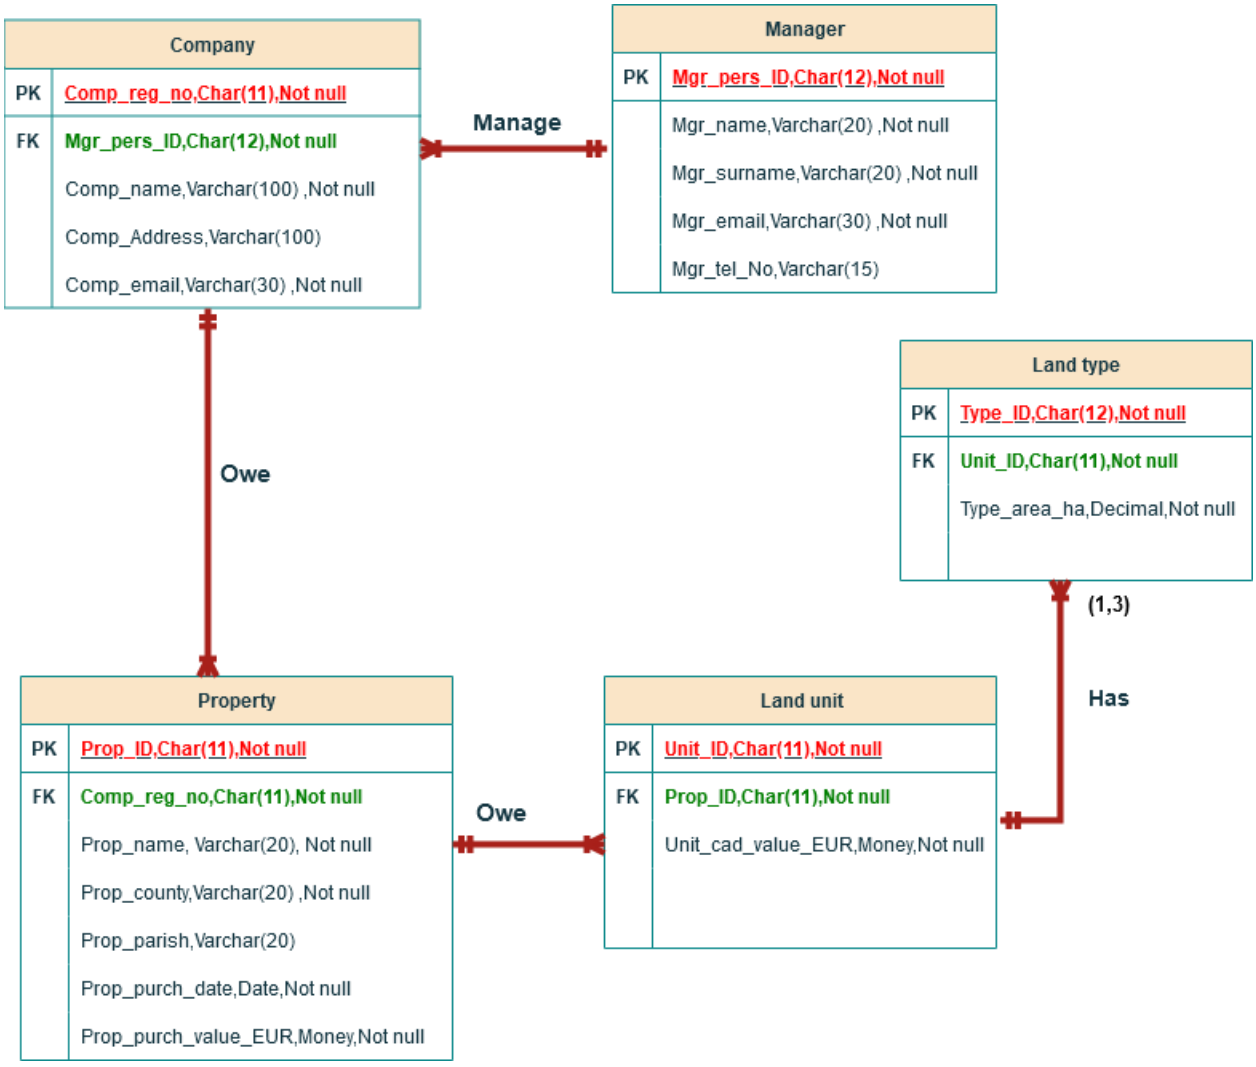

Land unit*(Unit_ID, Property_No, U_area_ha)*

PK *FK*

Land type*(Type_ID, Unit_ID ,Type_area_ha)*

PK *FK*

3.2. Logical model

3.3. Normalization justification

First Normal Form:

All primary keys are clearly defined;

All dependencies have been defined;

There are no repeating groups

Second Normal form:

All non-key attributes are fully functionally dependent on the primary key (no partial dependency).

Third Normal form:

There are no transitive dependencies (non-key attributes depending on other non-key attributes)

3.4. Brief description of the selected DBMS

To effectively manage multiple records with their associated date ranges, a SQL relational database management system has been chosen as the solution for data storage and management.

Implementation

4. Creating database and tables

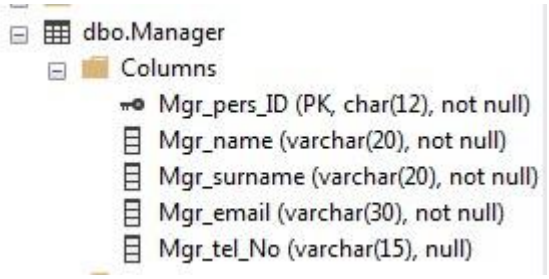

4.1. Creating database

```
create database st89060_Project
```

4.2. Creating table - Manager

```
create table Manager
(
Mgr_pers_ID Char(12) not null,
Mgr_name Varchar(20) not null,
Mgr_surname Varchar(20) not null,
Mgr_email Varchar(30) not null,
Mgr_tel_No Varchar(15),
Constraint C1 Primary key (Mgr_pers_ID)
)
```

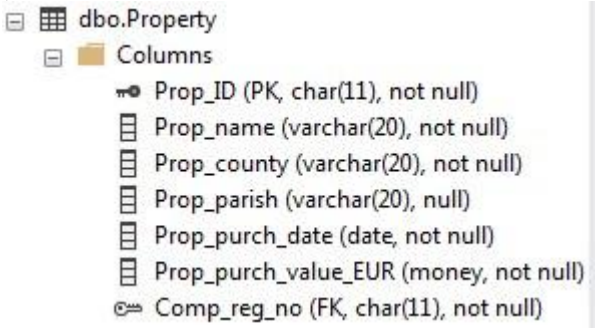

4.3. Creating table - Company

```
create table Company
(
Comp_reg_no char(11) not null,
Comp_name Varchar(100) not null,
Comp_Address Varchar(100),
Comp_email Varchar(30) not null,
Mgr_pers_ID Char(12) not null,
Constraint C2 Primary key (Comp_reg_no),
Constraint C3 Foreign key (Mgr_pers_ID) references Manager(Mgr_pers_ID)
)
```

4.4. Creating table - Property

```
create table Property
(
Prop_ID Char(11) not null,
Prop_name varchar(20) not null,
Prop_county Varchar(20) not null,
Prop_parish Varchar(20),
Prop_purch_date Date not null,
Prop_purch_value_EUR Money not null,
Comp_reg_no char(11) not null,
Constraint C4 Primary key (Prop_ID),
Constraint C5 Foreign key (Comp_reg_no) references Company(Comp_reg_no)
)
```

4.5. Creating table - Land unit

```
create table Land_unit
(
Unit_ID Char(11) not null,
Unit_cad_value_EUR Money not null,
Prop_ID Char(11) not null,
Constraint C6 Primary key (Unit_ID),
Constraint C7 Foreign key (Prop_ID) references Property(Prop_ID)
)
```

4.6. Creating table - Land Type

```
create table Land_type
(
Type_ID Char(12) not null,
Type_area_ha Decimal(10,2) not null,
Unit_ID Char(11) not null,
Constraint C8 Primary key (Type_ID),
Constraint C9 Foreign key (Unit_ID) references Land_unit(Unit_ID)
)
```

5. Inserting values

5.1. In to - Manager

```
insert into Manager
values
('291286-12315', 'Juris', 'Ezers', 'juris.ezers@gmail.com',null),
('150894-15675','Andris', 'Ozols', 'ozolos@inbox.lv','+37126712339'),
('240874-25684','Anna', 'Berga','berga@gmail.com',null)
```

	Mgr_pers_ID	Mgr_name	Mgr_surname	Mgr_email	Mgr_tel_No
1	150894-15675	Andris	Ozols	ozolos@inbox.lv	+37126712339
2	240874-25684	Anna	Berga	berga@gmail.com	NULL
3	291286-12315	Juris	Ezers	juris.ezers@gmail.com	NULL

5.2. In to – Company

```
insert into Company
values
('48502008094', 'Forest, I.K.', 'Lutriņi, Lutriņu pag., Saldus nov., LV-3861',
'forestry@gmail.com','291286-12315'),
('40103276250','SIA ECO FOREST',null, 'eco_forest@inbox.lv','150894-15675'),
('40103971103', 'SIA FORSH LAND', null, 'f_land123@inox.lv', '240874-25684'),
('40203471162', 'SIA Agro Meži', null, 'agromezi@gmail.com','150894-15675')
```

	Comp_reg_no	Comp_name	Comp_Address	Comp_email	Mgr_pers_ID
1	40103276250	SIA ECO FOREST	NULL	eco_forest@inbox.lv	150894-15675
2	40103971103	SIA FORSH LAND	NULL	f_land123@inox.lv	240874-25684
3	40203471162	SIA Agro Meži	NULL	agromezi@gmail.com	150894-15675
4	48502008094	Forest, I.K.	Lutrini, Lutrinu pag., Saldus nov., LV-3861	forestry@gmail.com	291286-12315

5.3. In to - Property

```
insert into Property
values
('32420090034','Austriņi','Aizkraukles','Aiviekstes','2024-08-18',88500,'48502008094'),

10	44720070076	Janiši-3	2024	6520.00	1.63	4,000.00

Conclusion

The database project successfully achieved its objectives by designing, implementing, and managing a robust and efficient database system. Through a thorough requirements analysis, I developed a comprehensive data model that accurately represented essential entities and their relationships. By applying advanced normalization techniques, I optimized the schema to minimize redundancy and ensure data integrity. The database was implemented using Microsoft SQL Server, enabling seamless storage, retrieval, and management of data.

This project was a transformative learning experience for me. With no prior experience in databases, every aspect was entirely new—from defining business objects to constructing SQL queries. Among the challenges I faced, creating complex queries to identify areas dominated by agriland or forestland proved to be particularly demanding. These queries required significant time and effort, but the process taught me invaluable lessons.

Despite these challenges, the knowledge I gained was remarkable. The hands-on experience of designing the database and implementing queries provided me with a solid foundation in database management. I believe the skills I acquired during this project will continue to benefit me in the future.
